

Ice Breaker

How would you describe your experiences sitting assessments and exams when you were younger?

- Can you recall any positive/negative experiences?
 - How did you manage the stress?

Please help yourself to a tea or coffee while you are discussing this.

**Help your Child
Revise @ KS3**

Tuesday, 10 May 2022

In this session we will:

- **Discuss the importance of revision and preparation for assessments.**
- **Provide information on the support offered to help your child revise at Etone College.**
- **Share strategies that can support your child in engaging with revision at home and managing assessment stress.**

THE IMPORTANCE OF REGULAR REVISION

It is **very** important that pupils prepare **carefully** for assessments and examinations so that they are fully ready.

Early revision will help them to **reduce** their stress and build **confidence** going into assessment/exams as they will not be relying on last minute preparation.

Revisiting **regularly** will help to **embed** knowledge and content into long term knowledge.

By building on this at KS3 you are not just **embedding knowledge** but developing the skills they will need to access late on.

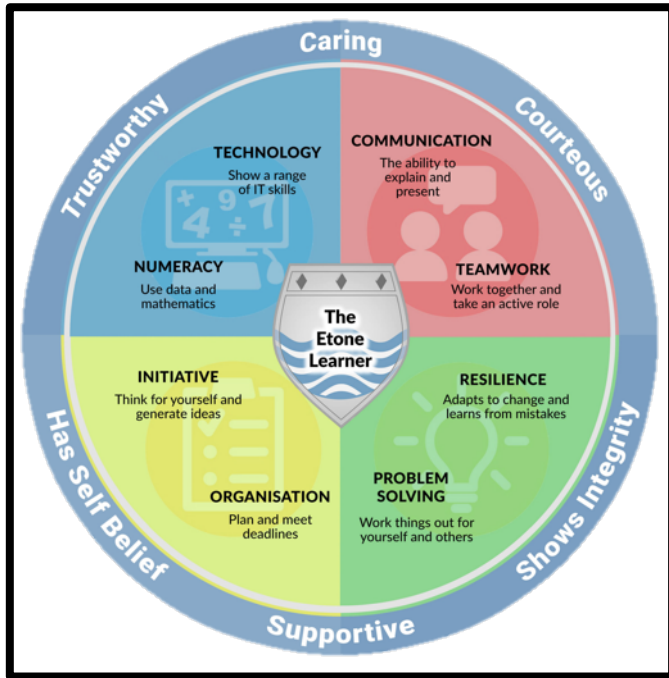

WHAT ARE THEY REVISING FOR?

- **In class assessments** – topic lists are shared with pupils in advance and lessons focus on recapping prior to the assessment. Where appropriate, these are interleaved.
- **KS3 Exams** – emulating what exams will be like and allowing pupils to experience testing on multiple topics. A very important part of preparing for the future and maintaining high expectations.

The Etone Learner

The Etone Learner underpins everything we do at Etone. It combines eight key Employability Skills with six core Etone Values which together provide the make up of what we expect our pupils to be.

Each term we have a value focus with awards handed out weekly to pupils who showcase the particular talent. For example this term it is **Trustworthy**.

WHEN DO WE ASSESS?

- Subject leaders plan and create their curriculum considering pupils end points.
- From there they will consider when it is best to assess summatively and map this out in their calendar.
- Across lessons, teachers will also assess formatively and use these to guide their next steps.

IN SCHOOL SUPPORT

- Extra Curricular including breakfast and after school support
- Topic Checklists and Knowledge Organisers
- Carefully planned curriculum that allows pupils to revisit previous work with in built revision units
- Revision/ assessment preparation built into schemes of learning
- Feedback sessions built in to give in depth feedback
- Access to high quality materials and resources
- Use of online learning platforms such as SENECA, Bedrock Learning
- Recommended reading lists, websites and resources

Underpinned by the latest research and guidance

Topic Checklists

Year 8 Topic 3: Fundamental Programming - Python

Introduction

In this unit you will be developing your understanding of core programming principles, revisiting these from your adventures into Scratch and HTML in Year 7.

Using this topic checklist as a key tool to refer to in lessons for homework and help when you are practising your coding.

Overview **KEY VOCABULARY: LOOK COVER, WRITE AND CHECK!**

Algorithm	An algorithm is set of instructions or rules that need to be followed in order to perform calculations or to solve a problem.
Sequence	The set of instructions or rules that an algorithm uses have to be in the right order. We call instructions in the correct logical order a 'sequence'.
Assign	When we set a variable to a given value – like <code>my_var = 3</code> – we say that we are "assigning the value of 3 to the variable <code>my_var</code> ." We try not to say 'equals'!
Data type	A data type is used to identify data that has common characteristics and purpose. For example, text and numbers are different data types because they are used for different purposes. Python has four data types: string (text), integers (whole numbers), floats (decimal numbers) and Boolean (either a 'true' value or a 'false' value).
Variable	A variable is a name given to an item of data so that the data can be stored in memory while your Python program is running. Variables enable you to input data from the keyboard and to change the data however you need to.
Casting	When we want to change the data types of a value (or the value assigned to a variable), we use casting. Python provides us with the code to do this. So for example, this code changes 43 from a string data type to an integer: <code>int("43")</code>
Syntax Error	A syntax error is a mistake in your Python program that prevents it from running (executing). Syntax errors are like spelling and grammar errors. There are also other types of error besides a syntax error: logic error and runtime error.
Input and output	With Python, we can print text and numbers to the screen, and we can also ask the user to input text or numbers using the keyboard.
Pseudocode	Pseudocode is instructions that are written in English (or a language of individual choice). Pseudocode is used to plan-out the correct sequence of instructions and to clarify the key features you may also need to use to make your program work correctly – such as loops and selection statements.
Condition/ Selection	A condition or selection statement is the name given to Python's if-elif-else statement that is used to decide which path a program will take. If a condition is 'true' then Python will choose to run specific lines of code, but if false Python will choose to run different lines of code.
Loops	Python loops allow you to keep revisiting previous lines of code until a certain condition is false. We can do this to use Python to count from one number to another, and then stop. We can also use loops to keep asking the user for input from the keyboard until the user enters particular text (such as 'quit') or a number (such as zero).

Computing Knowledge:

By the end of this topic you will know:

- What algorithms in a text based program language would look like
- How text based programming differs from visual block based such as SCRATCH, the shared principles and the use in varying applications
- How inputs, process and outputs work in text based programming with specific links to Python
- The characteristics of Python programming and the fundamentals of the systems to enable them to navigate the software and use the language and complete tasks
- How to create programs that solve real life computation problems using Python programming
- The importance of variable statements in programming, the processes behind selection and the application of this to solving problems

Computing Skills

By the end of this topic you will be able to:

- Describe how programming languages can be used with an emphasis on text based languages
- Apply this knowledge to creating initially simple codes in Python
- Describe the different data types within programming such as float, integer and string and correctly identify them
- Correctly apply strings, integer and use floats whilst creating programmes in Python
- Describe the purpose and method of using variables within code and apply this knowledge to wider world contexts
- Describe the procedures required to create programmes that apply computational thinking, such as decomposition and abstraction
- Apply this knowledge by creating programmes to solve computational problems
- To be able to describe the uses of programmes in the wider world context

Python Data Types

integer <i>A whole number</i> File Edit Format <code>print(3 + 2)</code> 5 >>>	float <i>A decimal number</i> File Edit Format Ru <code>print(3.95 * 2.34)</code> 9.243 >>>	string <i>A character or text</i> File Edit Format Run <code>print("hello world")</code> hello world >>>	Boolean <i>A True or False value</i> File Edit Formu <code>print(True)</code> <code>print(False)</code> True False >>>
--	---	--	--

Using Python variables

• Variables are like labels placed in boxes until they are needed.
 • The name of the variable is the name of the box.
 • These values can change and can be put back in the same boxes as well.

```
str_var = "Bob"
bool_var = True
int_var = 35

str_var = "156"
bool_var = False
int_var = 100

print(str_var)
```

```
135
Bobbidy Bob
>>>
```

Casting to different data types

We often need to change a data type using casting. For example, if text contains numbers and we want to use it to do maths, we need to change the data type from a string to an integer or a float. Data input from the keyboard is an example of this because the data input is always a string data type and never numbers until we use casting to convert it to an integer or a float.

Sleep calculator

- Extend the problem to find the total number of hours spent sleeping in a month
- Assume an average of 4.35 weeks per month

```
hourspernight = input("How many hours per night do you sleep? ")
hoursperweek = float(hourspernight) * 7
print("You sleep ,hoursperweek, hours per week")
hourspermonth = hoursperweek * 4.35
print("You sleep ,hourspermonth, hours per month")
```

Skills and Values

Across this unit you will utilise all of your Employability Skills and Etone Values however the following skills will be the main focus:

Technology – Using the technology available to us such as the programming software Python to create digital packages

Problem Solving – Creating solutions to real world problems using Computational Thinking

Organisation – Using orders of sequences and refining programmes to work effectively

Self Belief – Although coding can be tricky, anything is possible and there are no limits to what problems you can solve

**What are the
barriers your child
faces when
revising/
preparing at
home? How can
you help?**

You can help with:

- **Equipment**
- **Planning their time**
- **Providing a quiet space to revise**
- **Internet access**
- **Test them and talk through their notes**
- **Provide support and encouragement**
- **Ensure they drink regularly, eat well and take regular breaks**

Action Plan

Task:

Make a to do list of what your child needs to do to be ready to revise for their assessments.

What would they need to action?

When do they need to be completed by.

Action Plan

A week is 168 hours

Commitments	Hours taken	Hours remaining
8 hours of sleep	56	112
Hours at school (including travelling time)		
Eating		
Seeing Friends		
Hobbies/Clubs		

Work out how much time there is in a week to revise.

Co

Discuss

**What else goes into this time?
Adjust your calculation based on
anything else your child does. What
does this suggest about time they
could spend on revision? How many
'spare hours' would that leave
them? How does the weekend
compare to a school day?**

Hobbies/ Clubs

59

**Draw a
House**

Mark your work

- For a triangle roof give yourself a mark
- Two marks for a door
- One mark for each window you have
- 5 marks if your windows have cross frames
- 5 marks if you have a door handle
- 5 marks for a path
- 10 marks for a picket fence
- 10 marks for a chimney
- 20 marks if you have a puff of smoke from the chimney
- 5 marks for each bird you have in the sky

How many marks did you get?

Success Criteria

Before your child begins to revise they need to be clear about the success criteria and assessment objectives.

What is it they need to do successfully to achieve?

Providing time to go through mark schemes, criteria and specification allows pupils to better understand their goals.

This is how they learn in school and the more this is replicated at home the better.

REFLECTION

- ✓ Know the success criteria
- ✓ Know how to achieve it
- ✓ Know how they are assessed (points, levels, descriptors)
- ✓ Know how to reach the top criteria
- ✓ Take time to read and decode the question
- ✓ Recognise which skills, knowledge are required for each task

Metacognition

How do they Revise?

How do you think your children could revise?

What methods are you aware of?

Now compare your list with a partner and add ideas.

How do you revise best – talk to each other about how your child might revise.

Remember that different strategies work for different people and different subjects. Teachers will also provide top tips to study.

Common Methods

- ✓ Reading through notes and highlighting key points
- ✓ Condensing notes – summarising into key points
- ✓ Testing yourself
- ✓ Testing and revising with a friend
- ✓ Making mind maps
- ✓ Knowledge organisers
- ✓ Flow charts
- ✓ Flash cards
- ✓ Memory techniques
- ✓ Retrieval practice

Retrieval Practice

Retrieval practice is where pupils access already stored information from their memory bank and apply it to a task.

Quite often it starts with simple recall and builds up.

- ✓ **Test them and provide the opportunity to test themselves**
- ✓ **Encourage them to do practice questions**
- ✓ **Use revision websites and testing e.g. SENECA**
- ✓ **Use flashcards to test them and self test**
- ✓ **Spaced practice – revise, rehearse and then come back to it again**

Drawing Mind Maps

- ✓ Help you to organise information in a visual way
- ✓ One mind map for one topic usually
- ✓ Put the topic in the middle and add sub topics and more details around it
- ✓ Use colour and images to help you
- ✓ You can use bubbles or highlight information to help it stand out.

A hand-drawn revision timetable on a piece of paper. The title 'REVISION TIMETABLE' is written in large, bold letters at the top. Below the title is a grid with days of the week as columns and subjects as rows. The subjects listed are Maths, Biology, and History for Monday; English and Spanish for Tuesday; and the remaining days (Wednesday, Thursday, Friday, Saturday, Sunday) are empty.

REVISION TIMETABLE						
MON	TUE	WED	THUR	FRI	SAT	SU
Maths Biology History	English Spanish					

Drawing mind maps

Mind maps can make it easier to recall information in an exam as you have organized it visually

Colour and images help you to remember things

They help you to identify key ideas but also make links between them.

Useful for topics with links but less useful for things like formulae and vocab lists.

Flash Cards

Flash cards are small cards with a question or prompt on one side and the answers on the other.

They are great to help your child test themselves and for yourselves to be involved.

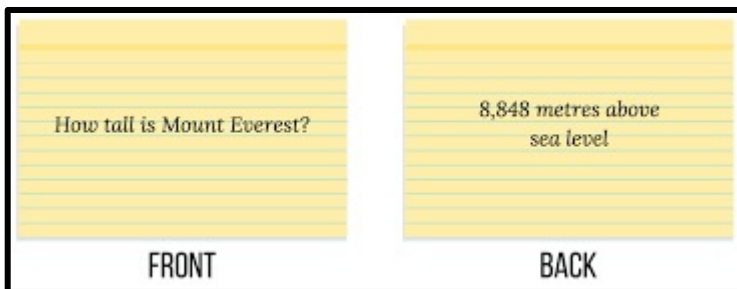

They are useful for learning key dates. Vocab, key terms and definitions, formulae.

There are many available online but it is good to make their own.

The best methods are to shuffle frequently and repeat multiple times

You can also put example questions on one side of the flash card and answers on the back.

KS3 English Revision Strategies

KS3 Library Lessons- Spellings

In Years 7 and 8, students have the opportunity to take part in a weekly library lesson.

During the library lesson students start with a key vocabulary test, these consist of various command words that they might come across the whole school curriculum, as well as subject specific terms.

A key spelling strategy that you may have come across when you were at school is 'Look, Cover, Write, Check'.

Whilst this is a good place to start, it very much relies on students being able to visualize a word.

LOOK

SAY

COVER

WRITE

CHECK

How can you support spelling?

- You will see a theme occur with revision strategies as we go through ways to help support memory and retention- it is all about links.
- In order for students to continue to build their vocabulary across all subjects, it is important for them to make links between words. This will help not only with spelling, but also with their ability to decode and understand words that they are less familiar with.
- An example of this is looking at prefixes and suffixes of words or in essence- roots. If students practice breaking words down into parts that they understand- they should be able to spell and understand it more freely.

Language AND Literature?

- Students at KS3 learn English Language and Literature skills side by side. It isn't until GCSE that we separate the two into their GCSE components.
- How can we support retention of all of the information that they learn?
- Again, it is all about LINKS.
- For example, at the end of year 8 we move on to the study of Romeo and Juliet. However, it isn't all about analysing the language and considering what Shakespeare is saying- it is about understanding the characters and their feelings, how they express themselves.

How to make links

Students may have read the scene where Romeo and Juliet meet at the Capulet's mansion.

How can we be sure that they understand?

Could they consider how Juliet is feeling at this point in time?

Students could create a mind map with a collection of emotions or adjectives to describe how Juliet is feeling.

Could they then move on to create a diary entry from Juliet's point of view?

Here is a [LINK](#) between Literature and Transactional Writing (a Language skill).

KS3 Maths Revision Strategies

Help Your Child Revise Mathematics

What do your pupils need in any revision situation?

- **Quiet room**
- **Equipment**
- **Topic List**
- **Knowledge Organisers**
- **Formula Sheet**
- **Worked examples**

Help Your Child Revise Mathematics

The Keys to Success in Maths

- **Retention**
- **Recall**
- **Practice**

Help Your Child Revise Mathematics

The Keys to Success Retention

Help Your Child Revise Mathematics

The Keys to Success Recall

- Formulas
- Steps
- Key facts

Knowledge Organiser
FACTORS, MULTIPLES AND PRIMES

Key Concepts

Prime factor decomposition
Breaking down a number into its prime factors

Highest common factor
Finding the largest number which divides into all numbers given

Lowest common multiple
Finding the smallest number which both numbers divide into

Examples

Find the highest common factor and lowest common multiple of 60 and 75:

60

```

      2
     / \
    30  2
   /  \
  15  2
 /  \
3    5
            
```

$2 \times 2 \times 3 \times 5$
 $2^2 \times 3 \times 5$

75

```

      3
     / \
    25  5
   /  \
  5    5
            
```

$3 \times 5 \times 5$
 3×5^2

HCF – Multiply all numbers in the intersection
 $= 3 \times 5 = 15$

LCM – Multiply all numbers in the Venn diagram
 $= 2 \times 2 \times 3 \times 5 \times 5 = 300$

Angles

BIDMAS

Calculate:

(a) $(3 + 2) \times 6 - 8$

(b) $4 \times 6 + 18 \div 2$

(c) $(17 - 2) \div 5 + 6$

Decide whether the following are true or false

(d) $6 \times 7 - 2 = 40$

(e) $8 \times (6 - 2) + 3 = 56$

Equations

Solve the following equations

1) $3x = 18$

2) $x + 9 = 22$

3) $\frac{x}{4} = 6$

4) $x - 12 = 19$

Probability

1) Sarah picks a ball out of the bag replaces it and then picks another. List all the possible outcomes.

2) Mark on the probability line Sarah picks

a. a red with an (R)

b. a black with an (B)

3) In words, what is the probability of

a. The sun rising tomorrow

b. Winning the lottery

6	Use the nth term rule to calculate any term	/		
7	Explain why a number is/isn't in a arithmetic sequence	/		

KS3 Science Revision Strategies

Help Your Child Revise Science

Science comes across as a very broad subject and can be daunting to revise with your child.

There are a number of resources and strategies available.

Does your child know what they need to revise?

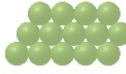

This is an example of a knowledge organiser from KS3.

These are available via their classroom teacher.

C1 Chapter 5: Matter Knowledge organiser

Changes of state

changes of state state of matter	solid	liquid	gas
how do the particles move?	Particles do not move around	Particles touching but can slide over each other	particles are spread out far away from each other
arrangement of particles			
can it be compressed?	No, because there is no space between the particles	No, because the particles are touching their neighbours	Yes, because there is space between the particles
can it flow?	No, because the particles can't move around	No, because the particles can't move around	Yes, because the particles can move around

← melting
← boiling/evaporation
← freezing
← condensation

Mixtures

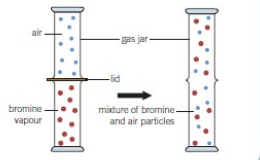

- Mixtures are different **substances** which are together, they are not chemically bonded and so are easy to separate
- The substances which make up a mixture keep their own **properties** unlike those in a compound
- A mixture is an **impure** substance as it does not have a fixed melting point, instead it has a range

- A **solution** is a type of mixture which is made up of two parts
- A **solute** is the part which has dissolved in the solution
- A **solvent** is the liquid part which the solute has dissolved into

- The **solubility** of a substance is a measure of how much of it will **dissolve**
- Not all solutes will dissolve in all solvents
- Solutes which do not dissolve are known as **insoluble**
- Substances which do dissolve are known as **soluble**
- The **solubility** of a substance can be increased by increasing the temperature of the solution or by stirring the solution
- A **saturated solution** is one where the maximum amount of solute has dissolved in it, no more solute will be able to dissolve

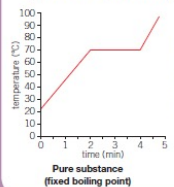

Diffusion

- Diffusion** is the movement of particles from an area of high concentration (lots of the same particle) to an area of low concentration (not a lot of the same particle)
- It is a random process which does not need energy
- The speed of diffusion can be increased by:
 - A higher temperature
 - Smaller particles diffusing
 - A gas rather than a liquid
- Diffusion does not happen in a solid as the particles can't flow

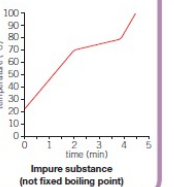

Melting and boiling points

- The **melting point** of a substance is the temperature at which it turns from a solid to a liquid, or a liquid to a solid
- The **boiling point** of a substance is the temperature at which it turns from a liquid to a gas or a gas to a liquid
- Pure substances** have a fixed (sharp) boiling or melting point, whereas **impure substances** have a range which appears as a diagonal line on a graph

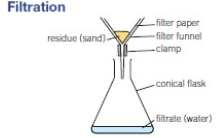

Pure substance (fixed boiling point)

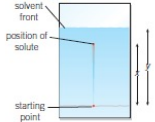

Impure substance (not fixed boiling point)

Separating Mixtures

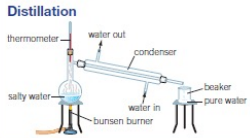

Filtration

Chromatography

Distillation

Evaporation

Key terms Make sure you can write definitions for these key terms.

boiling point chromatography condensation diffusion dissolve distillation evaporation filtration freezing impure substance melting point mixture
 property properties pure substance saturated solution substance soluble solubility solute solution solvent

Great Online Options

<https://www.bbc.co.uk/bitesize/levels/z4kw2hv>

This has been updated in recent years and has a simple layout to match the national curriculum.

Click on Science for Keystage 3.

Our Platform

We use Seneca for our online homework.

This has many benefits.

It is great for revision but as a parent you can sign up for a parent account.

<https://help.senecalearning.com/en/articles/3661316-how-to-sign-up-to-seneca-as-a-parent>

Specification/Knowledge Tests

Our scheme of work has a knowledge based test for each unit.

These include the core knowledge that students need to recall to be successful in tests and to apply to new scenarios in more demanding questions.

Matter 1

Total 
/15

- 1) Describe how particles are arranged in a solid.
- 2) Describe how particles are arranged in a liquid.
- 3) Describe how particles are arranged in a gas.
- 4) Why do solids have a fixed shape?
- 5) Why do liquids and gases flow?
- 6) State what an element is.
- 7) State what a compound is.
- 8) Define a mixture.
- 9) Define how a solution is made.
- 10) Define a saturated solution.
- 11) Write down the name of the labels A and B.

- 12) Explain the effect of increasing temperature on gas pressure.
- 13) State what boiling is and what temperature it happens at for pure water.
- 14) State what evaporation is and what temperature it happens at for pure water.
- 15) A material is allowed to cool. What is happening at A?

- 16) What is the melting/freezing point of the material in the graph above?

Youtube

The Science Break

<https://www.youtube.com/c/TheScienceBreak>

Revision Monkey

https://www.youtube.com/channel/UCDLgcm_hDXh4K99LJsSVHbw

READ THE INSTRUCTIONS AND COMPLETE

1. Write down the letters of the alphabet
2. Circle the vowels
3. Underline all the consonants
4. Find the letter that comes before R
5. Work out what is special about this phrase –
the quick brown fox jumped over the lazy dog
6. Don't do any of the above except for the first one

What is the point of this fun activity?

READ THE INSTRUCTIONS

It is important to read the instructions and the question very carefully.

Know what it is asking for.

Timed conditions can prompt urgency, but your child needs to be prepared for this and not rush in.

STUDY TIPS

- ✓ **Provide a quiet place if possible free from distractions like the TV, that has good lighting where it is easy to read.**
- ✓ **Plan ahead – make use of a timetable and structure their time**
- ✓ **Know their timetable and support them to complete it**
- ✓ **Keep track of focus to ensure all subjects are covered**
- ✓ **Provide regular breaks, snacks and little rewards where appropriate**
- ✓ **Offer your time to support and revise if possible**
- ✓ **Vary the strategies looked at tonight to provide variety with your child**

Find our support on our website here:
